

CARA Ulster Glade x A25/19

Very robust variety. It is extremely high yielding and very uniform.

Cara is also a versatile potato suitable for a wide range of culinary uses including chipping.

Susceptible to Dry rot *Fusarium sulphureum* Powdery scab, potato cyst nematode *Globodera pallida* Pa2/3,1. Tests show resistance to Black scurf, late blight on tubers, Silver scurf, common scab potato virus Yo, Bruising and Splitting. Cara is resistant to potato cyst nematode *Globodera rostochiensis* Ro1.

Tuber characteristics		Botanical description	
Smoothness of skin	Medium	Maturity	Maincrop
Shape of tuber	Short - oval	Height of plants	Tall - very tall
Depth of eyes	Shallow	Frequency of berries	Medium
Colour of skin	Red parti-coloured	Colour of flowers	White
Colour of flesh	Cream	Colour of sprout	Violet

Resistance to Damage, Pests and Diseases	Low	High
Black dot	6			
Black scurf	7		
Dry rot (coeruleum)	6			
Dry rot (sulphureum)	.	2							
Late blight on foliage	5				
Late blight on tubers	7		
Powdery scab	.	.	3						
Silver scurf	7		
Skin spot	.	.	.	4					
Blackleg	6			
Common scab	7		
Potato Cyst Nematode (Pa 2/3,1)	.	2							
Potato Cyst Nematode (Ro1)	9
Potato Leafroll Virus	5				
Potato Virus Yo	7		
Bruising	8	
Splitting	7
